**DETAILED ACTION**

1. Claims 1-24 have been presented for examination.

**Allowable Subject Matter**

2. The following is an examiner's statement of reasons for allowance: claims 1-24 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims, specifically:

Art Unit: 2128

The recitation with respect to claim 1 of:

receiving information from a client computing device at a server component on a server computing device, the server computing device configured for dynamic allocation of buffer memory on the server, the buffer memory on the server to be allocated to clients for file system transactions, wherein the information indicates the client needs additional resources to perform a transaction and the information received from the client includes a number of transactions that are currently pending on the client but have not been processed that exceed a maximum number of transactions available limit that was previously negotiated;

determining by the server component if allocating to the client the additional buffer memory on the server puts the server component in a resource constrained situation, wherein the server component is determined to be in a resource constrained situation by comparing a total number of transactions currently in use for all connections to the server and a total number of transactions that are currently pending on the clients requests for all connections to the server with a maximum number of transactions available on the server;

The recitation with respect to claim 13 of:

receiving a transaction request message on the server computing device from the client; wherein the transaction request message received from the client includes the number of transactions that are pending on the client due to an unavailability of sufficient resources to handle the transactions that was previously negotiated; wherein the transactions that are pending on the client have not been sent to the server; wherein the number of resources available to the client that are stored in the credit limit field is a maximum number of transactions available to the client that is initially determined when the client connects to the server at which point a negotiation is performed between the client and the server to establish the maximum number of transactions; and wherein the server rebalances resources when the transaction request places the server in a resource constrained situation as determined in part by a number of transactions that are pending on the clients; and

Art Unit: 2128

The recitation with respect to claim 18 of:

receive information from a client that indicates the client needs additional buffer memory on the server to perform a transaction; wherein the information received from the client includes a number of transactions that are that are pending on the client but have not been sent to the server due to an unavailability of sufficient resources to handle; wherein the number of transactions was previously negotiated; and to rebalance resources currently allocated to the client; wherein the server issues messages to any affected clients when the buffer memory on the server is rebalanced by the server; wherein the messages indicate to either reduce or increase each of the affected clients number of transactions, the messages comprising deltas specifying changes in the maximum number of transactions;

The recitation with respect to claim 19 of:

computing a total number of client connections, each client connection being associated with a client connected to a server, each client having a credit limit stored on the client and the server that identifies a number of resources that are allocated to the client; wherein the number of resources that are available to the client is initially determined when the client connects to the server at which point a negotiation is performed between the client and the server to the number of resources; wherein the client maintains information about the state of its allocated resources including a current number of outstanding credits used and a maximum number of credits available;

computing a total number of pending requests on each client device that have not been issued to the server that identifies a number of transaction requests that are not being handled due to a limitation on resources;

Specifically the aspect of pending client requests which have not been issued to or processed by the server, which as per Applicants arguments on the top of page 10 of their response dated 5 November 2009 includes not issued to the server, in combination with the remaining recited limitations as to the calculations performed on this value.

The claims are rendered statutory since claims 1, 18, and 19 recite a computer program executed by a processor and claim 13 recites a computer program executed by a computing device.

Art Unit: 2128

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
